1 Work done in current Week

I have successfully installed XAMPP which is a cross platform to support Apache, Mysql, PHP, Perl. So it would help to create a web server which can take username and password as input and depending on the algorithm(scheduling and marking) to make content visible to user which is required. It will create a database of existing user for read and write transaction to be successfully implement.

2 Further Plans for next Week

I have to learn PHP to use webserver technology and to implement a simple username and password entry to the database which can be further enhance to a no. of users as per our requirement.

3 Reviewers suggestion in Meeting

1: Read PHP throughly to have a better concept.
2: Learn some scheduling and partitioning algorithms
