1 Work done in current Week

In this week I have learnt HTML5 which is going to help to create my web-pages and for the support of style I am also learning CSS and JavaScript. My motivation is to create a website for users(students) where they will login using their credential and then backend algorithm will show them the related content only not the whole content.

2 Further Plans for next Week

I have to learn CSS and Javascript. Now I come to know about Django framework that is also somehow related to my work so I have some tutorial on Django also.

3 Reviewers suggestion in Meeting

1: Try Django also.
2: How will the load of students be handled think about it.
